HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Information Leakage in a Music Score

François Fages

Inria Saclay-Île de France, Palaiseau, France

When I was invited to contribute to a Festschrift in honor of Catuscia Palamidessi, I immediately thought I should not miss the opportunity to express my friendly feelings and admiration for the research career of a good friend of 30 years.

Initially, we had some common research axes on Logic Programming and Concurrent Constraint Programming. The GULP conference on these topics in Italy was a high place where Catuscia had no equal to defend, between Pisa and Florence, what should be the true Italian pronunciation, but with too subtle arguments for a foreigner. In 1990, the ICLP conference in Jerusalem and Eilat was a memorable mark of Catuscia's passion for Concurrent Logic Programming. In 2000, our small CSE Penn State-Inria workshop on "Concurrency and Logic" was premonitory of a new life for Catuscia at Inria. In the last decade however, our research interests evolved in different directions, respectively on quantitative information flows and quantitative biology.

When reading the recent papers of Catuscia on information leakage in information flows, in the quest of finding something to write related to those topics, a music unexpectedly came to my mind, with two concurrent voices playing obsessively on some jazzy rhythm, responding each other, and producing some bits of information about a secret message subject to interpretation, as always in music.

It is my pleasure to dedicate that little piece of music, called "*Concur in C*", to Catuscia for her 60th birthday. The music score is given below¹.

But could we try to apply Catuscia's theory on information leakage in information flows to the notes of each voice, in the hope of revealing something more on the meaning of this mysterious musical message remained enigmatic to the composer?

In information flow theory, a *channel*, or a *voice* in our musical interpretation, is a triple (X, Y, C) , where X and Y are finite sets (of secret input values and produced output music notes) and the channel matrix C is an $|X| \times |Y|$ matrix giving the probability of getting output y when the input is x . Given a prior distribution π on X , the joint distribution $p(x, y) = \pi[x]C[x, y]$ on random variables $X \times Y$ is the (unique) joint distribution that gives marginal probabilities $p(x) = \sum_y p(x, y) = \pi[x]$, conditional probabilities $p(y|x) = p(x, y)/p(x) = C[x, y]$ (if $p(x)$ is nonzero), and similarly $p(y)$ and $p(x|y)$.

The marginal distribution of the music notes in a voice are given by the frequencies of the notes in that voice. In *Concur in C*, the upper and lower voices happen to play the same number of notes, 186, with slightly different

¹ "*Concur in C*" can be heard with several orchestrations (piano, flute-saxophone, flute-organ-bass, big band) on <http://lifeware.inria.fr/~fages/music/>

distributions and slightly higher Shannon's entropy ($-\sum_{i=1}^{186} p_i(y) \cdot \log_2(p_i(y))$), i.e. more information, in the upper voice:

number of occurrences	C	C# Db	D	D# Eb	E	F	F# Gb	G	G# Ab	A	A# Bb	B	total
upper voice	32	0	0	54	2	14	20	40	0	0	22	2	186
$p^u(y)$	0.17	0	0	0.29	0.01	0.07	0.11	0.22	0	0	0.12	0.01	entropy 2.56
lower voice	41	0	0	36	0	22	27	39	0	0	21	0	186
$p^l(y)$	0.22	0	0	0.19	0	0.12	0.15	0.21	0	0	0.11	0	entropy 2.53

In music, it is expected that the upper voice contains more information than the lower voice usually dedicated to accompaniment. But here, the two voices play similar melodies in counterpoint which results in similar entropy values for both voices. It would be interesting to test this approach on more elaborate scores.

Thank you Catuscia for having once again inspired me, in an unexpected fashion, this self-surprising gift with curious questions about the quantification of information in music.

There has always been something magic in you.

Happy 60th Birthday Catuscia!

Acknowledgments: special thanks go to Hubert Garavel for having improved the layout of my music score, and for his tolerance regarding my parallel fifths.

Concur in C

To Catuscia Palamidessi for her 60th birthday

F. Fages

♩ = 110

Piano

Measures 1-2 of the piano score. The key signature is C major (one flat). The time signature is 4/4. The melody in the right hand consists of eighth and quarter notes, while the left hand is mostly rests.

Measures 3-4 of the piano score. The melody continues in the right hand with eighth and quarter notes, and the left hand begins with a similar rhythmic pattern.

Measures 5-7 of the piano score. Measure 5 features a triplet of eighth notes in the right hand. Measures 6 and 7 continue the melodic development.

Measures 8-10 of the piano score. Measures 8 and 9 have rests in the right hand, while the left hand plays a steady eighth-note pattern. Measure 10 introduces a new melodic line in the right hand.

Measures 11-12 of the piano score. The final measures of the excerpt, showing the continuation of the melodic and harmonic themes.

13

Measures 13 and 14 of a musical score in B-flat major (two flats). The treble clef staff contains eighth-note chords and single notes, while the bass clef staff features a continuous eighth-note accompaniment. Measure 13 ends with a repeat sign.

15

Measures 15, 16, and 17. Measure 15 has a treble staff with eighth-note chords and a bass staff with a single note and eighth-note accompaniment. Measures 16 and 17 feature a treble staff with a whole note chord and a bass staff with eighth-note accompaniment. Measure 17 ends with a repeat sign.

18

Measures 18 and 19. Measure 18 has a treble staff with a whole note chord and a bass staff with eighth-note accompaniment. Measure 19 has a treble staff with a whole note chord and a bass staff with eighth-note accompaniment. Measure 19 ends with a repeat sign.

20

Measures 20, 21, and 22. Measure 20 has a treble staff with a whole note chord and a bass staff with eighth-note accompaniment. Measure 21 has a treble staff with a whole note chord and a bass staff with eighth-note accompaniment. Measure 22 has a treble staff with eighth-note chords and a bass staff with eighth-note accompaniment. Measure 22 ends with a repeat sign.

23

Measures 23 and 24. Measure 23 has a treble staff with eighth-note chords and a bass staff with eighth-note accompaniment. Measure 24 has a treble staff with eighth-note chords and a bass staff with eighth-note accompaniment. Measure 24 ends with a repeat sign.
